1	Introduction	1
2	Preparations	15
2.1	Functional graphs of affine maps of finite groups	15
2.2	The master lemma	26
2.3	CRL-lists of affine maps of finite cyclic groups	31
2.4	Affine discrete logarithms and cycle lengths	41
3	Functional graphs of generalized cyclotomic mappings	45
3.1	Periodic points and CRL-lists	45
3.2	The induced subgraph on the periodic cosets	46
3.3	The rooted trees	48
3.4	Understanding the connected components	60
4	Computations and examples	63
4.1	Rooted trees under rigid procreation	64
4.2	An illustrative example	67
4.3	Special case: All A_i are permutations	82
5	Algorithmic complexity analysis	85
5.1	Framework and auxiliary results	85
5.2	Proof of Theorem 5.1.9	114
5.3	The isomorphism problem	151
6	Open problems	219
6.1	Asymptotic behavior of mpe over prime powers	219
6.2	Efficient comparison of arithmetic partitions	220
6.3	More problems concerning asymptotic growth rates	224
6.4	Extension to other coset-wise affine functions	225
6.5	Generalization to transformation graphs	230
A	Tabular overview of notation and terminology	233
