

Contents

1	Introduction and main results	1
1.1	System and notation	1
1.2	Assumptions and main result	5
1.3	Generalization to several variants	8
1.4	Overview on fluid-kinetic systems and related models	10
1.5	Strategy of the proof	15
2	Preliminaries	23
2.1	Energy estimates	23
2.2	Regularization of the system and setup of the bootstrap	30
2.3	Trajectories and straightening change of variable	40
3	Averaging operators related to the dynamics with friction	47
4	Analysis of the kinetic moments	59
4.1	The integro-differential system for derivatives of moments	60
4.2	First remainders	67
4.3	Leading terms and conclusion	69
4.4	Estimates of last remainders	73
5	Analysis of the fluid density	91
5.1	Equation for the derivatives of the fluid density	91
5.2	Propagation of the Penrose condition for short times	100
5.3	Extension of the solution	104
5.4	Bounds on the symbols	105
5.5	Elliptic estimates through pseudodifferential analysis	114
5.6	Final hyperbolic estimates	123
6	End of the proof	125
6.1	Conclusion of the bootstrap	125
6.2	Existence of a solution	126
6.3	Uniqueness of the solution	127
7	Generalization to several models of thick sprays	133
7.1	Generalization to the non-barotropic case	133
7.2	Generalization to the inelastic Boltzmann case	136
7.3	Generalization to the density-dependent drag case	142

A	Some classical (para-)differential inequalities on $\mathbb{T}^d$ and $\mathbb{T}^d \times \mathbb{R}^d$	149
B	Local well-posedness for (S_ε): Proof of Proposition 2.18	151
C	Pseudodifferential calculus with a large parameter on $\mathbb{R} \times \mathbb{T}^d$	161
