Preface	vii
Basic notions and notation	1
1 Preliminaries in convex geometry in \mathbb{R}^n	5
1.1 Affine hull, convex hull	5
1.2 Closed convex sets in \mathbb{R}^n	7
1.3 Additional properties of convex cones	11
1.4 Polyhedra, polytopes	14
1.5 Regular boundary points of closed convex sets and convex functions .	19
1.6 Support function of a compact convex set	21
1.7 Hausdorff distance of compact convex sets	26
1.8 Simple polytopes and strongly isomorphic polytopes	28
1.9 The polar (dual) of a convex body	31
1.10 Steiner and Schwarz symmetrizations of convex bodies in \mathbb{R}^n , and the isodiametric and Brunn–Minkowski inequalities	33
1.11 Centroid	39
1.12 Equality in the Brunn–Minkowski inequality for convex bodies and in the isodiametric inequality	43
1.13 Comments on Chapter 1	47
1.A Supplement: Epigraph and Legendre transform (convex conjugate) of convex functions	48
1.B Supplement: Recession cone and support function of closed convex sets	53
1.C Supplement: Iterated Steiner symmetrizations with respect to n fixed hyperplanes	55
1.D Supplement: The Hausdorff measure for subsets of \mathbb{R}^n	58
2 Surface area, surface area measure and cone volume measure for convex bodies in \mathbb{R}^n	61
2.1 Some integral formulas involving exterior unit normals	61
2.2 Parametrizing the boundary via the radial function	63
2.3 Surface area, Cauchy formula, continuity, monotonicity, outer Minkowski content	65
2.4 The isoperimetric inequality and the anisotropic isoperimetric inequality for convex bodies	69

2.5	Surface area measure	71
2.6	Cone volume measure	76
2.7	Well-approximating polytopes in terms of the Hausdorff distance and the Banach–Mazur distance	83
2.8	Comments on Chapter 2	89
2.A	Supplement: Divergence theorem for convex bodies	91
2.B	The projection body and the isoperimetric inequality	91
3	The Brunn–Minkowski and the Prékopa–Leindler inequalities in the measurable case	93
3.1	The Brunn–Minkowski inequality for measurable sets	93
3.2	The Hadwiger–Ohmann proof of the Brunn–Minkowski inequality	96
3.3	An application of the Brunn–Minkowski inequality: The Green–Tao theorem on sumsets	97
3.4	The Prékopa–Leindler inequality	98
3.5	Proof of Prékopa–Leindler inequality via optimal transport	101
3.6	Coordinatewise product of unconditional convex bodies	106
3.7	Hausdorff metric on the space of compact subsets	107
3.8	Steiner symmetrization of compact sets and the Brunn–Minkowski inequality	108
3.9	Comments on Chapter 3	112
3.A	Supplement: Common elementary proof of the Brunn–Minkowski inequality and the Prékopa–Leindler inequality by induction	115
3.B	Supplement: Equality in the Brunn–Minkowski inequality for measurable sets via Henstock–Macbeath and Hadwiger–Ohmann	117
4	The isoperimetric inequality in the case of Lipschitz boundary	121
4.1	The isoperimetric inequality in the Euclidean space	121
4.2	Sobolev inequality	124
4.3	The anisotropic isoperimetric inequality	127
4.4	Wulff shape and minimizing surface energy	131
4.5	Isodiametric and isoperimetric inequalities in the hyperbolic and spherical spaces	133
4.6	The Gaussian isoperimetric and the log-Sobolev inequalities	137
4.7	Log-concave measures: The Cheeger (isoperimetric) constant, a Poincaré inequality and the Kannan–Lovász–Simonovits conjecture	145
4.8	Comments on Chapter 4	155
4.A	Supplement: The spherical space and the hyperbolic space	160
4.B	Supplement: Equality in the isodiametric inequality in H^n and S^n	166
4.C	Supplement: Isoperimetric inequality for k -gons in H^2 , S^2 or \mathbb{R}^2	168

4.D	Supplement: Concentration of measure via isoperimetric-type inequalities	171
5	The isoperimetric inequality for sets of finite perimeter in \mathbb{R}^n and the Sobolev inequality for BV functions	177
5.1	Sets of finite perimeter and BV functions	178
5.2	Characterization of isoperimetric sets	187
5.3	The anisotropic Sobolev inequality for BV functions	192
5.4	Sets of finite weighted perimeter	195
5.5	Comments on Chapter 5	202
6	Associated ellipsoids, Blaschke–Santaló inequality and the reverse isoperimetric inequality	203
6.1	John and Löwner ellipsoids	203
6.2	Some characterizations of ellipsoids	206
6.3	Reverse isoperimetric inequality	207
6.4	Ellipsoid of inertia, isotropic position of a convex body	212
6.5	The Blaschke–Santaló inequality for the polar body	222
6.6	Reverse Blaschke–Santaló inequality and Mahler’s conjecture	226
6.7	Functional Santaló inequality and reverse form	228
6.8	Volume approximation by polytopes	231
6.9	The M -ellipsoid, the covering number and the reverse Brunn–Minkowski inequality	236
6.10	Comments on Chapter 6	238
6.A	Supplement: The John condition on the inscribed maximal volume ellipsoid	243
6.B	Supplement: The rank one geometric Brascamp–Lieb inequality	246
6.C	Supplement: Minimal surface area position – isotropic surface area measure	249
6.D	Supplement: Maximal area of inscribed polygons and the extremality of ellipses	251
6.E	Supplement: The Blaschke–Santaló inequality for general convex bodies	253
6.F	Supplement: From the affine isoperimetric to the Blaschke–Santaló inequality via Minkowski’s inequality and the Minkowski problem	259
7	Steiner formula and mixed volumes	261
7.1	Steiner formula, intrinsic volumes and mean projections	261
7.2	Isoperimetric inequality for mean projections	264
7.3	Mixed volumes	266
7.4	The Minkowski inequality and the Aleksandrov–Fenchel inequality	271

7.5	Aleksandrov’s lemma for Wulff shapes	275
7.6	The L_p -Brunn–Minkowski inequality for $p \geq 1$	278
7.7	Isoperimetric-type problems for polytopes	283
7.8	Comments on Chapter 7	289
7.A	Supplement: Proof of the Aleksandrov–Fenchel inequality based on polytopes	292
7.B	Supplement: The simplex mean width conjecture and some related results	300
8	Convex bodies and Gaussian curvature	303
8.1	Second-order differentiability of the boundary	303
8.2	Surface area measure and the curvature function	310
8.3	Mixed volumes and smooth convex bodies	312
8.4	Minkowski inequality, the surface area measure and the other area measures	318
8.5	The Hilbert–Aleksandrov operator and the Aleksandrov–Fenchel inequality	320
8.6	Stability of the (anisotropic) isoperimetric and the Brunn–Minkowski inequalities for convex bodies	325
8.7	The logarithmic Brunn–Minkowski and the logarithmic Minkowski conjectures	335
8.8	The L_p -Brunn–Minkowski and the L_p -Minkowski conjectures and inequalities when $p \in (0, 1)$	350
8.9	L_p -affine surface areas for $p > 0$	359
8.10	Comments on Chapter 8	371
8.A	Supplement: Aleksandrov’s mixed discriminant inequality	376
8.B	Supplement: The upper semicontinuity of the L_p -affine surface area for general convex bodies	379
8.C	Supplement: Affine isoperimetric inequality via Steiner symmetrization	382
8.D	Supplement: Valuations on convex bodies	385
9	The Minkowski problem, the L_p-Minkowski problem, and the L_p-Brunn–Minkowski inequality/conjecture	391
9.1	Monge–Ampère equations in \mathbb{R}^d	391
9.2	The Minkowski problem	393
9.3	The L_p -Minkowski problem	398
9.4	Uniqueness in the L_p -Minkowski problem	409
9.5	Comments on Chapter 9	413
9.A	Supplement: Weak continuity of the L_p -surface area measures and diameter bounds in terms of the entropy	432

9.B	Supplement: The even L_p -Minkowski problem for $p \in [0, 1)$	438
9.C	Supplement: About the L_p -Minkowski problem in general for $p \geq 0$	443
A	Background from analysis and algebra	455
A.1	Weak convergence, regular measures and the Lebesgue measure	455
A.2	Hölder's, Jensen's and Minkowski's inequalities and the L^p function spaces	458
A.3	Lebesgue integral, convolution, Fourier transform	461
A.4	Hausdorff measure and Lipschitz functions	462
A.5	The Stone–Weierstrass theorem	466
A.6	Differentiability of convex functions	467
A.7	Self-adjoint elliptic linear operators on the sphere S^{n-1}	468
A.8	Matrices: The Hilbert–Schmidt norm, Hadamard's inequality and the Perron–Frobenius theorem	470
A.9	Log-concave functions	472
	References	481
	Index	521
