

Contents

| | | |
|----------|--|----|
| 1 | Introduction | 1 |
| 1.1 | The knot surgery algebra | 1 |
| 1.2 | Surgery formulas as \mathcal{K} -modules | 2 |
| 1.3 | Pairing theorems | 4 |
| 1.4 | Splicing knot complements | 5 |
| 1.5 | Dual knots | 6 |
| 1.6 | Examples | 7 |
| 1.7 | Arc systems | 7 |
| 1.8 | General bordered manifolds with torus boundary | 10 |
| 2 | Hypercubes and Heegaard Floer homology | 11 |
| 2.1 | Background on Heegaard Floer homology | 11 |
| 2.2 | Hypercubes and hyperboxes of chain complexes | 13 |
| 2.3 | Compressing hyperboxes | 14 |
| 2.4 | A_∞ -categories and twisted complexes | 17 |
| 2.5 | Hypercubes of attaching curves | 18 |
| 2.6 | More hypercubes | 20 |
| 3 | A_∞-modules | 23 |
| 3.1 | Type-A and type-D modules | 23 |
| 3.2 | Bimodules | 23 |
| 3.3 | The Lipshitz–Ozsváth–Thurston box tensor product | 24 |
| 3.4 | Morphisms of modules and bimodules | 25 |
| 3.5 | External tensor products | 28 |
| 3.6 | Hypercubes as type-D modules | 36 |
| 4 | Homological perturbation theory | 41 |
| 4.1 | A_∞ -modules | 41 |
| 4.2 | DA bimodules | 43 |
| 4.3 | Hypercubes | 43 |
| 4.4 | Hypercubes of DA bimodules | 45 |
| 5 | Linear topological spaces | 47 |
| 5.1 | Linear maps | 48 |
| 5.2 | Direct products | 48 |
| 5.3 | Linear compactness | 49 |

| | | |
|-----------|--|------------|
| 5.4 | Tensor products | 50 |
| 5.5 | Associativity and commutativity relations | 51 |
| 5.6 | The tree topology | 53 |
| 6 | The link surgery formula | 63 |
| 6.1 | Statement of the link surgery formula | 63 |
| 6.2 | Gradings and algebraic reduction maps | 65 |
| 6.3 | On the algebra of the link surgery formula | 68 |
| 7 | The knot surgery algebra | 73 |
| 7.1 | The algebras \mathcal{K} and \mathcal{L} | 73 |
| 7.2 | Topologies on \mathcal{K} and \mathcal{L} | 74 |
| 7.3 | Alexander modules | 77 |
| 7.4 | Split Alexander modules | 77 |
| 7.5 | External tensor products | 79 |
| 7.6 | Box tensor products | 83 |
| 7.7 | Finitely generated \mathcal{K} -modules | 84 |
| 8 | Link surgery modules over \mathcal{K} and \mathcal{L} | 87 |
| 8.1 | The type-D module for a solid torus | 87 |
| 8.2 | The type-A module for a solid torus | 87 |
| 8.3 | The merge bimodule | 89 |
| 8.4 | The type-A identity bimodule | 93 |
| 8.5 | The knot surgery formula over \mathcal{K} | 93 |
| 8.6 | The link surgery formula over \mathcal{L} | 95 |
| 9 | σ-basic systems of Heegaard diagrams | 99 |
| 9.1 | Systems of arcs | 99 |
| 9.2 | σ -basic systems of Heegaard diagrams | 100 |
| 9.3 | Meridional σ -basic systems | 102 |
| 9.4 | Basic systems for general systems of arcs | 103 |
| 9.5 | Tensor products of hypercubes of attaching curves | 106 |
| 9.6 | Basic systems and connected sums | 106 |
| 10 | Hypercubes and disjoint unions | 111 |
| 10.1 | Small translate theorems | 112 |
| 10.2 | Disconnected Heegaard surfaces | 114 |
| 11 | Hypercubes and connected sums | 121 |
| 11.1 | Cylindrical boundary degenerations | 124 |
| 11.2 | The 0-dimensional case | 125 |

| | | |
|-----------|--|------------|
| 11.3 | Connected sums and hypercubes | 133 |
| 12 | The pairing theorem | 143 |
| 12.1 | The statement | 143 |
| 12.2 | Unpacking the statement | 143 |
| 12.3 | Proof of the pairing theorem | 145 |
| 13 | Arc systems and the link surgery formula | 149 |
| 13.1 | Basepoint moving maps on hypercubes | 149 |
| 13.2 | Basepoint actions on hypercubes | 153 |
| 13.3 | Homology actions on hypercubes | 155 |
| 13.4 | Relative homology actions and hypercubes | 160 |
| 13.5 | Free stabilization | 165 |
| 13.6 | Algebraic relations and the diffeomorphism action | 167 |
| 13.7 | Relating homology actions and base point actions | 177 |
| 13.8 | Properties of the U -action on link surgery complexes | 180 |
| 14 | The alpha-beta transformer | 185 |
| 14.1 | The bimodule | 185 |
| 14.2 | Basepoint actions as A_∞ -morphisms | 186 |
| 14.3 | The transformer as a mapping cone bimodule | 188 |
| 14.4 | Properties of the transformer bimodule | 188 |
| 14.5 | Proof of Theorem 14.1 | 190 |
| 15 | The pair-of-pants bimodules | 193 |
| 15.1 | The $W_{\alpha\beta,\alpha}$ and $W_{\alpha\beta,\beta}$ bimodules | 193 |
| 15.2 | Proof of Theorem 15.1 | 194 |
| 15.3 | Relation with the AA-identity bimodule | 196 |
| 15.4 | Relation with the bordered invariant of $S^1 \times P$ | 200 |
| 16 | The link surgery complex of the Hopf link | 203 |
| 16.1 | Computation of the surgery complex | 203 |
| 16.2 | The Hopf link complex as a type-D module | 211 |
| 16.3 | The Hopf link with arc system $\mathcal{A}_{\alpha\beta}$ | 213 |
| 17 | Minimal models for the Hopf link surgery complex | 217 |
| 17.1 | DA-perspectives on the Hopf link complex | 217 |
| 17.2 | Minimal models for the Hopf link Floer complex | 218 |
| 17.3 | Minimal models over \mathcal{K} | 223 |
| 17.4 | Comparison with the Eftekhary–Hedden–Levine model | 228 |

| | |
|--|-----|
| 18 Examples and basic properties | 233 |
| 18.1 Meridional Dehn twists | 233 |
| 18.2 The type-D invariants of solid tori | 238 |
| 18.3 The surgery exact triangle | 243 |
| 18.4 Finite generation | 244 |
| A Splicing operations | 251 |
| A.1 Splices and connected sums | 251 |
| A.2 The Hopf link and changes of parametrization | 252 |
