Preface	v
Logical dependence between the sections	viii
 A Preliminaries	1
1 Maps and topologies	1
Exercises for Section 1	17
2 Connectedness and topological dimension	18
Exercises for Section 2	24
 B Topological groups	25
3 Basic definitions and results	25
Exercises for Section 3	41
4 Subgroups	42
Exercises for Section 4	48
5 Linear groups over topological rings	49
6 Quotients	51
Exercises for Section 6	63
7 Solvable and nilpotent groups	64
Exercises for Section 7	69
8 Completion	70
Exercises for Section 8	88
 C Topological transformation groups	89
9 The compact–open topology	89
Exercises for Section 9	96
10 Transformation groups	97
Exercises for Section 10	103
11 Sets, groups, and rings of homomorphisms	104
Exercises for Section 11	110
 D The Haar integral	111
12 Existence and uniqueness of Haar integrals	111
Exercises for Section 12	120
13 The module function	121
Exercises for Section 13	126
14 Applications to linear representations	127
Exercises for Section 14	140

E	Categories of topological groups	141
15	Categories	141
	Exercises for Section 15	144
16	Products in categories of topological groups	145
17	Direct limits and projective limits	154
	Exercises for Section 17	162
18	Projective limits of topological groups	163
	Exercises for Section 18	166
19	Compact groups	167
	Exercises for Section 19	170
F	Locally compact abelian groups	171
20	Characters and character groups	171
	Exercises for Section 20	177
21	Compactly generated abelian Lie groups	178
	Exercises for Section 21	186
22	Pontryagin's Duality Theorem	187
23	Applications of the Duality Theorem	190
	Exercises for Section 23	198
24	Maximal compact subgroups and vector subgroups	199
	Exercises for Section 24	203
25	Automorphism groups of locally compact abelian groups	204
26	Locally compact rings and fields	208
	Exercises for Section 26	224
27	Homogeneous locally compact groups	225
G	Locally compact semigroups	237
28	Topological semigroups	237
	Exercises for Section 28	244
29	Embedding cancellative directed semigroups into groups	245
	Exercises for Section 29	248
30	Compact semigroups	249
	Exercises for Section 30	254
31	Groups with continuous multiplication	255
H	Hilbert's Fifth Problem	257
32	The Approximation Theorem	257
33	Dimension of locally compact groups	260
34	The rough structure	264
35	Notions of simplicity	268
36	Compact groups	272
37	Countable bases, metrizability	274
38	Non-Lie groups of finite dimension	275
39	Arcwise connected subgroups	277
40	Algebraic groups	281

I	Actions on trees	283
41	Graphs and trees	283
	Exercises for Section 41	286
42	Regular and biregular trees	287
	Exercises for Section 42	294
43	Trees obtained as universal covers	295
	Exercises for Section 43	300
44	Subtrees, and ends of trees	301
	Exercises for Section 44	305
45	Automorphism groups of trees	306
	Exercises for Section 45	309
46	Bipartite graphs	310
	Exercises for Section 46	313
47	Elliptic and hyperbolic automorphisms of trees	314
	Exercises for Section 47	318
48	Compact groups of automorphisms of trees	319
	Exercises for Section 48	322
49	Non-compact groups of automorphisms of trees	323
50	Tits' Independence Property	325
51	Normal functions on trees	328
J	The scale function	329
52	Definitions and some examples	330
	Exercises for Section 52	336
53	Existence of tidy subgroups	337
	Exercises for Section 53	351
54	Properties of the scale function	352
	Exercises for Section 54	362
55	Further properties of the scale function	363
56	Applications of the scale function	364
57	Simple and topologically simple groups	367
K	Locally compact Galois groups	371
58	Automorphism groups of fields as topological groups	371
	Exercises for Section 58	376
59	Galois theory for infinite extensions	377
	Exercises for Section 59	384
60	Locally compact totally disconnected groups as Galois groups	385
	Exercises for Section 60	389
	Indices	391
	Index of symbols	391
	Subject Index	398
	References	405
