Preface	v
1 Cluster algebras	1
1.1 Introduction	1
1.2 Introduction to cluster algebras via examples	2
1.3 Cluster algebras	10
1.4 Principal coefficients	33
2 Cluster algebras of surface type	37
2.1 Marked surfaces	37
2.2 Arcs and triangulations	38
2.3 Flips of arcs in triangulations	41
2.4 The rank of a marked surface	44
2.5 Tagged arcs	49
2.6 The matrix of a triangulation	53
2.7 The cluster algebra of a triangulation of a marked surface	57
2.8 Snake graphs	61
2.9 Band graphs	63
2.10 Labelled snake graphs from surfaces	64
2.11 Perfect matchings for snake graphs	67
3 Cluster categories	73
3.1 Path algebras and their representation theory	73
3.2 Categories of chain complexes	79
3.3 Properties of the derived category of $\text{mod}(A)$	84
3.4 Cluster categories from acyclic quivers	86
3.5 Categorifications of cluster algebras	94
3.6 The cluster category of a marked surface	96
4 Applications and further directions	105
4.1 Frieze patterns	105
4.2 Surface models for categories of modules	121
A Background from representation theory and homological algebra	143
A.1 Categories	143
A.2 Functors	144

A.3	Abelian categories	145
A.4	Triangulated categories	148
A.5	Localization	150
A.6	Auslander–Reiten translations	153
A.7	Ice quivers and quivers with potential	157
B	Hints and solutions for exercises	159
	List of symbols	173
	Index	175
	References	179
