Contents

1 Introduction 1
- 1.1 The book at a glance 1
- 1.2 Point of view 3
- 1.3 Prerequisites and conventions 5
- 1.4 Useful tools 8

Part I Linear algebra over rings **11**

2 Warm-up I: Matrices with ring entries 13
- 2.1 Introduction 13
- 2.2 Universal identities 13
- 2.3 Reminder of the Gaussian elimination method 20
- 2.4 Exercises 27

3 Modules 33
- 3.1 Introduction 33
- 3.2 Definitions and first examples 34
- 3.3 Quotient, cokernel 35
- 3.4 Exact sequences and diagrams 38
- 3.5 Functoriality and diagram chasing 41
- 3.6 Universal properties 44
- 3.7 A key example: The $\mathbf{k}[T]$-module V_a 46
- 3.8 Cokernel of diagonal matrices 49
- 3.9 Properties to handle with caution 56
- 3.10 Summary of some specifics of modules 59
- 3.11 Exercises 60

4 Rings and modules 67
- 4.1 Introduction 67
- 4.2 Quotient rings 67
- 4.3 Algebras 69
- 4.4 Integrality 70
- 4.5 The Chinese remainder theorem 73
- 4.6 Exercises 76

5 Noetherianity 81
5.1 Introduction 81
5.2 Noetherian modules 81
5.3 Exercises 85

6 Matrices and modules over a PID 89
6.1 Introduction 89
6.2 Survival kit for PID and Euclidean rings 89
6.3 Matrix equivalence in PID and Euclidean rings 91
6.4 Invariant factors of a module 95
6.5 Insight into K-theory* 98
6.6 The resultant of two polynomials* 100
6.7 Exercises 107

Part II Linear algebra over fields **111**

7 Warm-up II: Duality 113
7.1 Introduction 113
7.2 Basic notions 113
7.3 Formal biorthogonality 114
7.4 Dual basis 115
7.5 Ante-dual basis: Biduality 116
7.6 Orthogonality in finite dimension 116
7.7 Transpose of a linear map: Functoriality 118
7.8 Farkas' lemma* 120
7.9 Exercises 121

8 Similarity in $M_n(\mathbf{k})$ 127
8.1 Introduction 127
8.2 Similarity in $M_n(\mathbf{k})$ 127
8.3 An important example: Diagonalisation 131
8.4 Frobenius normal form 132
8.5 Commutant 134
8.6 Algorithm from equivalence to similarity* 135
8.7 Summary on similarity invariants 136
8.8 Exercises 137

9 The irreducibility toolbox 141
9.1 Introduction 141
9.2 A UFD criterion 142

9.3 GCD, LCM in UFD . . . 146
9.4 Transfer of the UFD property . . . 147
9.5 Irreducibility of the cyclotomic polynomial over **Q** . . . 150
9.6 Exercises . . . 152

10 Primary decomposition in PID . . . 157
10.1 Introduction . . . 157
10.2 Torsion modules over PID . . . 157
10.3 Application: Jordan normal form . . . 159
10.4 Nilpotent matrices . . . 162
10.5 Exercises . . . 164

11 Semisimplicity . . . 169
11.1 Introduction . . . 169
11.2 Semisimple modules . . . 169
11.3 "Reminder" of perfect fields . . . 173
11.4 Jordan–Chevalley decomposition . . . 175
11.5 Jordan–Chevalley and spectral projectors . . . 179
11.6 Exercises . . . 180

12 Simultaneous reduction . . . 185
12.1 Introduction . . . 185
12.2 Commuting family of matrices . . . 186
12.3 The Burnside–Wedderburn theorem . . . 187
12.4 Stable family of nilpotent and unipotent matrices . . . 188
12.5 Connected solvable matrix subgroups* . . . 189
12.6 Exercises . . . 191

Part III About continuity of matrix reduction **195**

13 Turing's matrix conditioning . . . 197
13.1 Introduction . . . 197
13.2 Condition number . . . 197
13.3 Exercises . . . 200

14 Topology of similarity classes* . . . 203
14.1 Introduction . . . 203
14.2 χ-types . . . 204
14.3 The implication $\underline{P} \preceq \underline{Q} \Rightarrow \underline{P} \leq \underline{Q}$ . . . 206
14.4 The implication $\underline{P} \leq \underline{Q} \Rightarrow \underline{P} \preceq \underline{Q}$ . . . 206

14.5 The nilpotent case . . . 210
14.6 Topological applications . . . 212
14.7 Exercises . . . 215

15 Eigenvalues . . . 219
15.1 Introduction . . . 219
15.2 Continuity of primary components (χ fixed) . . . 219
15.3 Regularity of polynomial roots . . . 221
15.4 Localising eigenvalues . . . 224
15.5 Perron–Frobenius for nonnegative matrices . . . 230
15.6 Exercises . . . 235

Leitfaden . . . 239

Index . . . 241

References . . . 245
